

Docket No. AUS9-2000-0555-US1

**ABSTRACT OF THE DISCLOSURE**

**METHOD AND APPARATUS FOR PROCESSING ELECTRONIC RECORDS  
FOR PHYSICAL TRANSACTIONS**

5

A method and apparatus for processing transactions. In particular, the mechanism of the present invention is used for processing information for physical  
10 transactions. A data structure is received at a customer data processing system for a physical transaction entered into by the customer. This information is extracted and used to update records or other information in the customer data processing system. Further, a second data  
15 structure is sent to a supplier of an item used in the physical transaction. This data structure is used by the supplier to update information maintained by the supplier about the item. After updating the information, the information is analyzed to generate statistics about  
20 physical transactions involving the item.
